

JAMES AND THE GIANT THE PEACH

ACTIVITY SHEET

REMARKABLE REGENERATING VEG

Use kitchen scraps to create your very own veg garden - no magic beans required!

1. Cut off the stalks and leaves of your celery, leaving the bottom two inches of the plant intact.

2. Place in water in a sunny place and change every 1-2 days. A window sill or bright shelf is perfect for this!

3. Once roots have formed re-plant into soil and water whenever soil starts to feel dry.

4. As soon as stalks are about 3-4 inches long you can start to cut off them off and eat them! Use outer stalks first.

BONUS TASK :

Explore which other food scraps you could use to grow new plants. Try planting chili or pepper seeds directly into soil. Place the bottom couple of inches of spring onions in a jar of water and watch them re-grow (just skip step 3 above). Or if you're feeling extra-specially adventurous you could even try planting the stone of a peach to get your very own giant peach tree (you might have to have a little patience with this one!).

REMARKABLE VEG GROWTH CHART

See how much your remarkable regenerating veg has grown using this handy chart!

**ABSOLUTELY
GIGANTIC!**

pretty huge

getting bigger...

about average

fairly titchy
